Problem Statement

Students, professionals, founders, and freelancers spend hours daily on repetitive tasks like replying to emails, scheduling meetings, remembering follow-ups, and managing multiple apps. Existing productivity tools are fragmented and do not understand individual working styles.

We selected the themes of On-Device AI, Productivity, and Generative AI Research to build a privacy-focused AI assistant that learns user behavior and automates repetitive workflows. Unlike generic chatbots, our system acts like a digital worker that understands how the user communicates, prioritizes, and organizes work.

This problem is important because repetitive administrative tasks reduce productivity, increase context switching, and consume valuable time. Our solution helps users save time, reduce cognitive workload, and focus on meaningful work.

Current Solution & Gaps

Existing Solutions

Current tools like Gmail, Google Calendar, Notion, and AI chatbots help manage specific tasks such as emails, scheduling, or note-taking.

What's Missing / Broken

These tools are fragmented and reactive. They do not understand the user's personal workflow, communication style, priorities, or decision patterns. Users still spend significant time manually coordinating repetitive work across multiple apps.

Opportunity

There is an opportunity to build a unified AI-powered digital worker that learns user behavior and proactively automates repetitive workflows like replying, scheduling, follow-ups, and task prioritization — improving productivity while reducing cognitive overload.

Your Solutions

What We Built

Clone Yourself — an AI-powered digital productivity assistant that learns user behavior and automates repetitive workflows like email replies, scheduling, follow-ups, and task prioritization.

Core Idea

Instead of acting like a generic chatbot, the system behaves like a digital worker that understands how the user communicates, prioritizes, and organizes work.

Key Features

- AI-generated email replies in user tone
- Smart meeting scheduling using calendar data
- Follow-up reminders and task prioritization
- Productivity dashboard with analytics
- File organization and daily AI brief
- On-device AI support using lightweight local LLMs

Idea

Demo/Product Walkthrough

The image displays four screenshots of the 'Clone Yourself' application interface, demonstrating its features across different views.

Dashboard View:

- PRIORITY INBOX:** A message stating "Inbox zero achieved. No priority emails right now."
- THIS WEEK'S IMPACT:** A summary of productivity metrics:
 - ACTIONS AUTOMATED: 6
 - TIME SAVED: 0.8 hrs
 - EMAILS CLASSIFIED: 487
 - REPLIES SENT: 3
 - EVENTS CREATED: 3
- ACTIVITY BREAKDOWN:** A bar chart showing the distribution of activities: Replies, Events, Classified, and Automated.

Email View:

- 5 ways Claude can work with you (2/5):** An email from Claude Team with a "Generate Reply" button.
- Campus recruitment by Altair Engineering 2027:** An email from Placement Officer MSBIT with a "Draft Ready" status and a "SEND REPLY" button.
- Automating rollbacks for AWS AppConfig:** An email from New Relic with a "Normal" status.

Calendar View:

- SUGGESTED MEETING TIMES:** A list of suggested meeting slots with their match percentages and confirmation buttons.

Suggested Meeting Times	Match	Action
Fri, 8 May - 02:30 pm - 03:00 pm	85% match	Confirm
Fri, 8 May - 03:00 pm - 03:30 pm	85% match	Confirm
Fri, 8 May - 03:30 pm - 04:00 pm	85% match	Confirm
- ALL FREE SLOTS (NEXT 7 DAYS):** A list of available free slots for the next 7 days.

Idea

Demo/Product Walkthrough

Tech & Architecture

Tech Stack

Frontend: Next.js + Tailwind CSS

Backend: FastAPI (Python)

Database: PostgreSQL + FAISS Vector Store

Hosting: Vercel

AI Usage

APIs: Gmail API, Google Calendar API

Frameworks: FastAPI, React

System Flow

User Data (Emails, Calendar, Files) → Behavior Engine → AI Decision Layer → Suggested Actions / Automation → Productivity Dashboard

Impact & Use cases

Real-Life Use Cases

- Students managing assignments, internships, and deadlines
- Professionals handling emails, meetings, and follow-ups
- Founders coordinating teams and communication workflows
- Freelancers managing clients, proposals, and schedules

Scale Potential

The platform can scale into enterprise AI copilots, recruiter assistants, student productivity tools, and personalized workflow automation systems across industries.

Differentiation

Why Our Solution Stands Out

Unlike generic AI chatbots or productivity apps, Clone Yourself learns the user's personal workflow, communication style, priorities, and scheduling behavior to act like a digital worker instead of just an assistant.

Strong Moats

- Behavior Cloning Engine – Personalized AI that adapts to individual work patterns over time
- Cross-App Productivity Memory – Unified intelligence across emails, calendar, tasks, and files instead of isolated automation tools
